

# Video

Ben Taylor      Lize Chen

April 2020

- theme: informative code along. (coding with explanations and principles in voiced over).
- ideas: the general features of the language that are must know. Maybe not high level material but the stuff to get any basic program running.
- code examples: lists, loops, procedures, types, as well as general material needed to create the file
- the demo will be at the very end after we have explained everything in the video, we will show how they all can work together to make an beginner/intermediate program like ours.
- this part is still in the works. Maybe OBS screen record.
